

Warrior Acquisition Software

Wireline Data Acquisition Software

Applications

- Casedhole Logging
- Memory Logging
- Data processing
- Data visualization

Features and Benefits

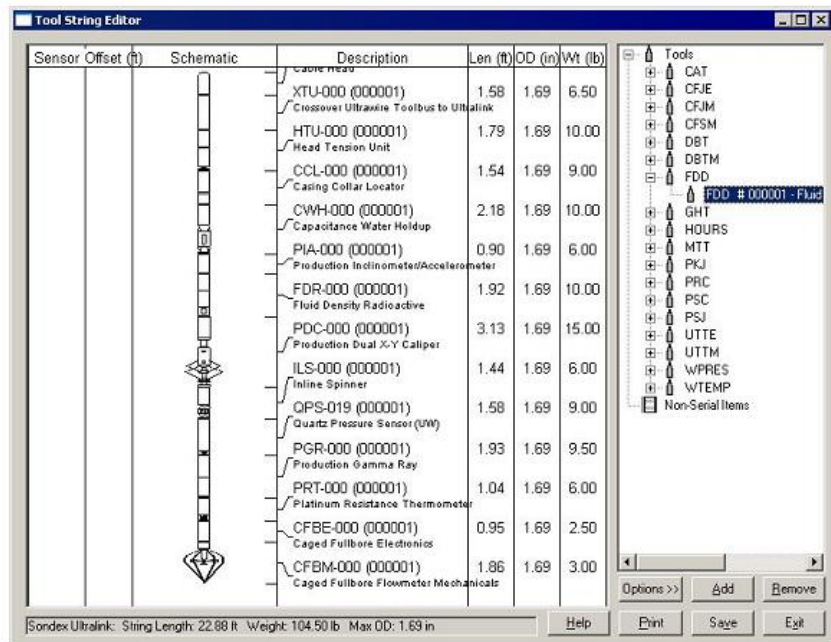

- Distributable Digital Media
- Ease of use
- Supports downhole tool acquisition from many suppliers

The Sondex **Warrior** Acquisition is a mature data acquisition software that is easy to use and can be used to log all of Sondex Ultrawire tools.

The Software supports many existing industry standards from Cased hole, Open hole and Memory oil field logging tool manufacturers.

It can be used on a single computer to acquire real time data from a borehole, to replay, recalculate and print logs from the raw data or imported data from other systems such as LAS or LIS data formats.

Warrior software Release 8.0 is a third-generation 64 / 32-bit Unicode program. A new feature to Warrior 8 is the addition of Distributable Digital Media, the ability to generate a distributable digital media that would allow a User to supply their clients an interactive copy of log data to view without needing Warrior software installed on their computer.
