Cordant™ Asset Strategy

Digital Strategy Development and Optimization

Financially optimized reliability strategies developed and optimized using a centralized, connected and complete dataset.

Cordant™ Asset Strategy enables you to build and structure reliability strategies that drive accurate modelling of performance, cost and risk optimized scenarios. Consolidate, structure and augment data to develop optimized reliability strategies for each equipment type, for a given criticality, and customize as needed for operational context.

Quality Strategy Data, Quality Decisions

Your existing data, cleansed, consolidated, structured and supplemented by our library, enables informed and accurate modelling of maintenance scenarios that deliver optimal performance.

Strategy Library Access for a Fast Start

Utilize our component strategy library and start building strategies, faster. 600+ component types, 3,000+ component items, 25,000+ failure modes, and 100,000+ mitigating and secondary actions.

Standardization AND Customization

Find the sweet spot and get the best of both worlds. Use standard generic strategy content to get started, and customize as needed to cater for site operational context.

Align Reliability Strategies to Performance Goals

Consolidate and structure your corporate master data to provide a strong platform for continuous, data driven alignment of strategy and operational goals.

Rapid Development and Review

Utilize a component-based approach for fast strategy development and review. Set the component maintenance strategy and then rapidly push it through to all physical like-assets.

Tap into 20+ years of Reliability Expertise

With a proven, experienced approach to asset reliability improvement, we add immediate value through conducting projects, augmenting your team with additional resources or by providing structured mentoring.

As our asset base grows and our assets age, it is even more important for our maintenance strategies to be well planned and executed. By working with ARMS Reliability, we can leverage industry best practice tools, so we can deploy the best possible solutions for our entire asset base, in the most efficient manner.

Andrew Behn, Maintenance Planning and Reliability Team Lead, Icon Water

Cordant™ Asset Strategy is the next evolution of ARMS Reliability’s platform formerly known as OnePM. In April 2021, ARMS Reliability was acquired by Baker Hughes. Now as part of Cordant’s integrated suite of solutions we offer unparalleled Asset Performance Management capabilities.
