

## Policy Statement on Waste Management

Baker Hughes is committed to complying with applicable waste management regulations affecting our operations. We recognize the importance of responsible management of waste helping to preserve the environment. We are focused on minimizing the resources we use and incorporate recycling and reuse in our operations where possible. We continually refine our internal policies and procedures through regular review, assessment, and implementation of best practices.

Our current Waste Management and Minimization policy define our procedures to ensure that waste is properly managed. We designate accountable individuals at our facilities to ensure proper waste management and waste reduction associated with our services and operations. In addition, we aim to reduce our waste to landfill. We aim to use raw materials as efficiently as possible to reduce waste from our operations.

We publish our key performance indicators of our waste management annually in our Corporate Sustainability Report.
